

1. Enhance the above grammar by and find new grammar call it G3

a. Left factor rules 5&6. Call the new term OI

$$I \Rightarrow '-' OI$$

$$OI \Rightarrow ZD$$

$$OI \Rightarrow O DS$$

b. Left factor rules 7&8. Call the new term OD

$$DS \Rightarrow D OD$$

$$OD \Rightarrow DS$$

$$OD \Rightarrow \lambda$$

c. G3 After update

$$S \rightarrow N \$$$

$$N \rightarrow I F$$

$$I \rightarrow ZD$$

$$I \rightarrow O Ds$$

$$I \rightarrow '-' OI$$

$$OI \rightarrow ZD$$

$$OI \rightarrow O DS$$

$$DS \rightarrow D OD$$

$$OD \rightarrow DS$$

$$OD \rightarrow \lambda$$

$$D \rightarrow ZD$$

$$D \rightarrow O$$

$$ZD \rightarrow '0'$$

$O \rightarrow ['1'-'9']$

$F \rightarrow .Ds$

$F \rightarrow \lambda$

2 . Build the nullable, first and follow table for G3

|    | Nullable | first                | Follow                |
|----|----------|----------------------|-----------------------|
| S  | F        | '-' '0'<br>['1'-'9'] | None                  |
| N  | F        | '-' '0'<br>['1'-'9'] | \$                    |
| I  | F        | '-' '0'<br>['1'-'9'] | • \$                  |
| OI | F        | '0'<br>['1'-'9']     | . \$                  |
| DS | F        | '0'<br>['1'-'9']     | . \$                  |
| OD | F        | '0'<br>['1'-'9']     | . \$ '0'<br>['1'-'9'] |
| D  | F        | '0'<br>['1'-'9']     | . \$ '0'<br>['1'-'9'] |
| ZD | F        | '0'                  | . \$ '0'<br>['1'-'9'] |

### 3 . Build the LL(1) parse table for G3

|    | '_'                           | '0'                         | ['1'-'9']                      | \$                       | .                        |
|----|-------------------------------|-----------------------------|--------------------------------|--------------------------|--------------------------|
| S  | $S \rightarrow N \$$          | $S \rightarrow N \$$        | $S \rightarrow N \$$           |                          |                          |
| N  | $N \rightarrow I F$           | $N \rightarrow I F$         | $N \rightarrow I F$            |                          |                          |
| I  | $I \rightarrow \text{'_'} OI$ | $I \rightarrow ZD$          | $I \rightarrow O DS$           |                          |                          |
| OI |                               | $OI \rightarrow ZD$         | $OI \rightarrow O DS$          |                          |                          |
| DS |                               | $DS \rightarrow D OD$       | $DS \rightarrow D OD$          |                          |                          |
| OD |                               | $OD \rightarrow DS$         | $OD \rightarrow DS$            | $OD \rightarrow \lambda$ | $OD \rightarrow \lambda$ |
| D  |                               | $D \rightarrow ZD$          | $D \rightarrow O$              |                          |                          |
| ZD |                               | $ZD \rightarrow \text{'0'}$ |                                |                          |                          |
| O  |                               |                             | $O \rightarrow \text{'1'-'9'}$ |                          |                          |
| F  |                               |                             |                                | $F \rightarrow \lambda$  | $F \rightarrow . DS$     |

4: Write the JLex regular expression specification file to recognize the following tokens.

| JLex Regular Expression | Token Type |
|-------------------------|------------|
| "."                     | DOT        |
| [1-9]                   | NUM        |
| 0                       | ZERO       |
| "_"                     | MINUS      |
| {WS} .                  | SPACE      |
|                         | ERROR      |

```

import java.io.*;
enum TokenType{NUM , ZNUM , MINUS , DOT , EOF ,
ERROR}
class Token{
TokenType type;
String value;
public Token (TokenType type , String value){
this.type = type;
this.value = value;
}
}
%%
%class Lexer
%public
%function getNextToken
%type Token
%char
%eofval{
return new Token(TokenType.EOF,"");
%eofval}
%{
    public static void main(String[]args) throws
IOException{
        String number = "-23.45";
        Lexer l = new Lexer(new StringReader(number));
        Token token;
        while((token = l.getNextToken()).type !=
TokenType.EOF)
            System.out.println(token.type + "\t" +
token.value);
    }
}%
%line
%char
%%
<YYINITIAL> [1-9] {return new Token (TokenType.NUM
, yytext());}
<YYINITIAL> [0] {return new Token (TokenType.ZNUM ,
yytext());}
<YYINITIAL> "-" {return new Token (TokenType.MINUS
, yytext());}
<YYINITIAL> "." {return new Token (TokenType.DOT ,
yytext());}
<YYINITIAL> [\r\t\n\f\ ]* {}
<YYINITIAL> . {System.out.println("ERROR");}

```

## 5: Write a top down parser code for G3

```
import java.io.*;
public class NumberParser {
    private Token currentToken = null;
    public Lexer lexer;
    public NumberParser(Lexer lexer) {
        this.lexer = lexer;
    }
    public void eat(TokenType type) {
        if (currentToken.type == type) {
            try {
                currentToken = lexer.getNextToken();
            }
            catch (Exception ex) {
                Error("unexpected token " + type);
            }
        }
        else {
            Error("unexpected token " + type);
        }
    }
    public void Error(String msg) {
        System.out.println(msg);
        System.exit(0);
    }

    public Token getNextToken() {
        try {
            if(currentToken == null)
                currentToken = lexer.getNextToken();
            return currentToken;
        }
        catch (Exception ex) {
            Error(ex.getMessage());
            return null;
        }
    }
    public void S() {
        Token nt = getNextToken();
```

```

switch(nt.type){
case MINUS :
N();
eat(TokenType.EOF);
break;
case ZNUM :
N();
eat(TokenType.EOF);
break;
case NUM :
N();
eat(TokenType.EOF);
break;
default :
Error("unexpected token " + nt.type +
"\t");
}
}

```

```

public void N() {
Token nt = getNextToken();
switch(nt.type){
case MINUS :
I();
F();
break;
case ZNUM :
N();
F();
break;
case NUM :
N();
F();
break;
default :
Error("unexpected token " + nt.type +
"\t");
}
}
public void I() {
Token nt = getNextToken();
switch(nt.type){
case MINUS :
eat(TokenType.MINUS);
OI();
break;
case ZNUM :

```

```

ZD();
break;
case NUM :
O();
DS();
break;
default :
Error("unexpected token " + nt.type +
"\t");
}
}
public void OI() {
Token nt = getNextToken();
switch(nt.type){
case ZNUM :
ZD();
break;
case NUM :
O();
DS();
break;
default :
Error("unexpected token " + nt.type +
"\t");
}
}
public void DS() {
Token nt = getNextToken();
switch(nt.type){
case ZNUM :
D();
OD();
break;
case NUM :
D();
OD();
break;
default :
Error("unexpected token " + nt.type +
"\t");
}
}
public void OD() {
Token nt = getNextToken();
switch(nt.type){
case ZNUM :
DS();
break;

```

```

case NUM :

break;
case EOF :
break;
case DOT :
break;
default :
Error("unexpected token " + nt.type +
"\t");
}
}
public void D() {
Token nt = getNextToken();
switch(nt.type){
case ZNUM :
ZD();
break;
case NUM :
O();
break;
default :
Error("unexpected token " + nt.type +
"\t");
}
}
public void ZD() {
Token nt = getNextToken();
switch(nt.type){
case ZNUM :
eat(TokenType.NUM);
break;
default :
Error("unexpected token " + nt.type +
"\t");
}
}
public void O() {
Token nt = getNextToken();
switch(nt.type){
case NUM :
eat(TokenType.NUM);
break;
default :
Error("unexpected token " + nt.type +
"\t");
}
}
}

```

```
public void F() {
    Token nt = getNextToken();
    switch(nt.type){
    case EOF :
        break;
    case DOT :
        eat(TokenType.DOT);
        DS();
        break;
    default :
        Error("unexpected token " + nt.type +
            "\t");
    }
}

public static void main(String[] args) {
    String msg = "12345";
    StringReader s = new StringReader(msg);
    Lexer lexer = new Lexer(s);
    NumberParser parser = new
        NumberParser(lexer);
    parser.S();
    System.out.println("Success");
}
}
```
